

$$\begin{aligned}
 & \text{logit}(Y_{it}) = \alpha_i + \gamma_t \\
 & + \beta_1(\text{GOP}_i \times \text{LegWin}_t) \\
 & + \beta_2(\text{GOP}_i \times \text{COVID}_t) \\
 (1) \quad & + \beta_3(\text{GOP}_i \times \text{IRA/CHIPS}_t) \\
 & + \beta_4(\text{GOP}_i \times \text{Bill partisanship}_t) \\
 & + \beta_5(\text{GOP}_i \times \text{Fiscal magnitude}_t) \\
 & + \varepsilon_{it}
 \end{aligned}$$

- *Baseline: Democrats; outside legislative windows.*
- *Fixed effects: member (α_i) and calendar month (γ_t); SEs two-way clustered by member and month.*
- *Outcome: member–month logit of deficit-tweet share.*
- *Bill partisanship (z) and fiscal magnitude (z) are standardized month-level measures.*
