

$$\begin{aligned}
 \text{logit}(Y_{it}) = & \alpha_i + \gamma_t \\
 & + \beta_1(\text{GOP}_i \times \text{LegWin}_t) \\
 & + \beta_2(\text{GOP}_i \times \text{Minority presidency}_t) \\
 & + \beta_3(\text{GOP}_i \times \text{LegWin}_t \times \text{Minority presidency}_t) \\
 (2) \quad & + \beta_4(\text{GOP}_i \times \text{COVID}_t) \\
 & + \beta_5(\text{GOP}_i \times \text{IRA/CHIPS}_t) \\
 & + \beta_6(\text{GOP}_i \times \text{Bill partisanship}_t) \\
 & + \beta_7(\text{GOP}_i \times \text{Fiscal magnitude}_t) \\
 & + \varepsilon_{it}
 \end{aligned}$$

- *Coefficients are GOP–Dem gaps; the three-way term is the shift in the legislative-window gap under minority presidency.*
- *Fixed effects: member and month; SEs two-way clustered by member and month.*
- *Standardized covariates: Bill partisanship (z), Fiscal magnitude (z).*
